

— STRATEGIC PARTNERSHIP

Energy Independence *for ALL.*

Beyond solar. Beyond batteries. Delivering **24/7 always-on clean power** through decentralized solar-thermal microgrids.

100% ENGINEERED & MADE IN THE USA

ELITE.ENERGY

CONFIDENTIAL & PROPRIETARY

OUR MISSION

Doing these 6 things creates *Energy Independence.*

01

Maximum Energy Output

Create the most amount of usable energy per unit generated.

02

Smallest Footprint

Operate on the absolute smallest possible footprint (0.25 Acres).

03

Speed to Market

Deliver the fastest speed from groundbreaking to full operation.

04

Lowest Cost

Achieve the lowest possible long-term capital and operating cost.

05

Reliable Delivery

Provide the most reliable, firm power delivery globally, 24/7.

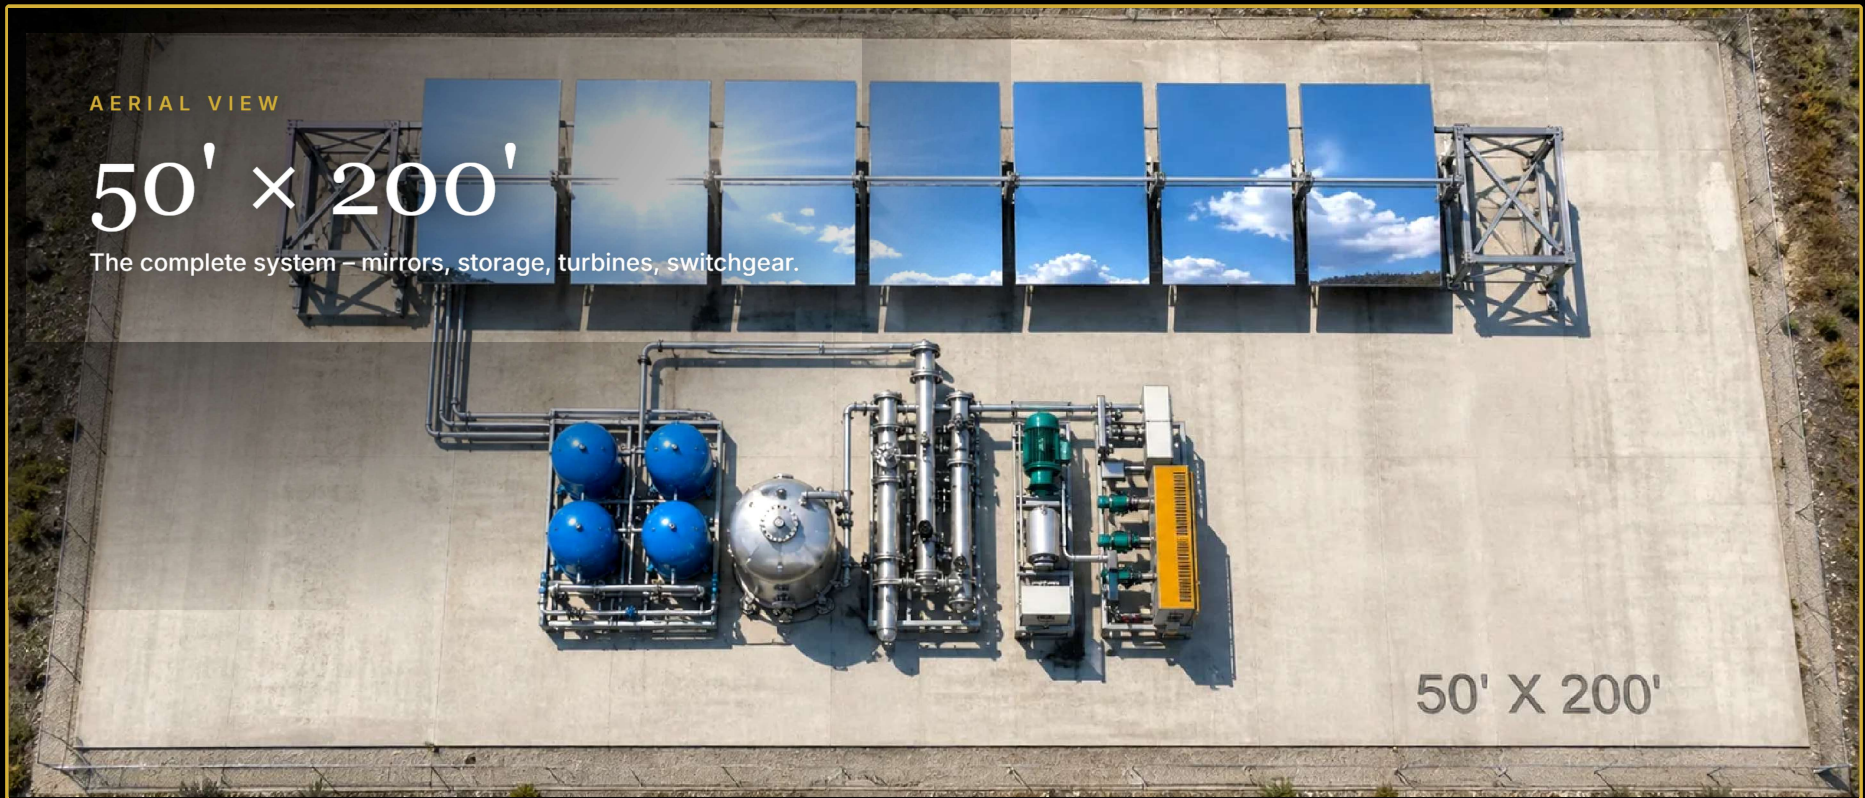

06

Highest Scalability

Ensure modular, rapid system scalability for unlimited growth.

PERFORMANCE DATA

The numbers that *change everything.*

5+ MW

CONTINUOUS OUTPUT

24/7

ALWAYS-ON POWER

0.25 ac

TOTAL LAND REQUIRED

5,000+

What is *Elite Power*?

STEP 01

Capture

Smart mirrors track the sun, focusing extreme heat onto a central point to heat a special liquid to 850+°F.

STEP 02

Storage

The superheated liquid is safely held inside heavily insulated thermal chambers, retaining its extreme heat with near-zero loss.

STEP 03

Generate

The hot liquid is released to create vapor, which spins a high-efficiency industrial turbine to generate continuous electricity.

STEP 04

Deliver

The generated energy is dispatched through custom switchgear directly to your facility, fully independent of the grid.

Unmatched *System Benefits.*

BEHIND THE GRID

Everything in one compact system — no grid connection needed.

LOW MAINTENANCE

Built to run 25+ years with minimal intervention required.

ZERO EMISSIONS / ESG

100% clean — no burning, no exhaust. Exceeds all environmental standards.

ALWAYS ON — 24/7

Thermal storage means power all night — not just in the sun.

DEFLATIONARY COST

Unlike utility bills that rise yearly, your cost goes to zero.

MODULAR

Base units start at 5+ MW and combine seamlessly. Add capacity as your demand increases.

GLOBAL DEPLOYMENT

Engineered in USA, installed and supported worldwide.

NO DOWNTIME

When the utility grid goes down, your facility stays fully powered without interruption.

50' >

Why Everything Else *Falls Short.*

RISKY & UNPREDICTABLE

1. The Public Grid

- ✗ City lines fail = you lose power.
- ✗ Zero control over bill. Rates hike.
- ✗ Forever "renting", never own.

CAPACITY FACTOR: ~60%

TOO MUCH LAND

2. Standard Solar

- ✗ Produces zero power 14+ hrs/day.
- ✗ Needs ~50 acres for high output.
- ✗ Massive batteries create fire risks.

CAPACITY FACTOR: ~24%

DIRTY & VOLATILE

3. Natural Gas

- ✗ Burns fossil fuels, misses ESG.
- ✗ Fuel costs fluctuate wildly.
- ✗ Endless monthly fuel expenses.

CAPACITY FACTOR: ~58%

THE SMART CHOICE

4. The Elite Solution

- ✓ Thermal tech runs steady 24/7.
- ✓ 200x more space efficient.
- ✓ Own the system. End monthly rent.

CAPACITY FACTOR: 83% (2ND TO NUCLEAR)

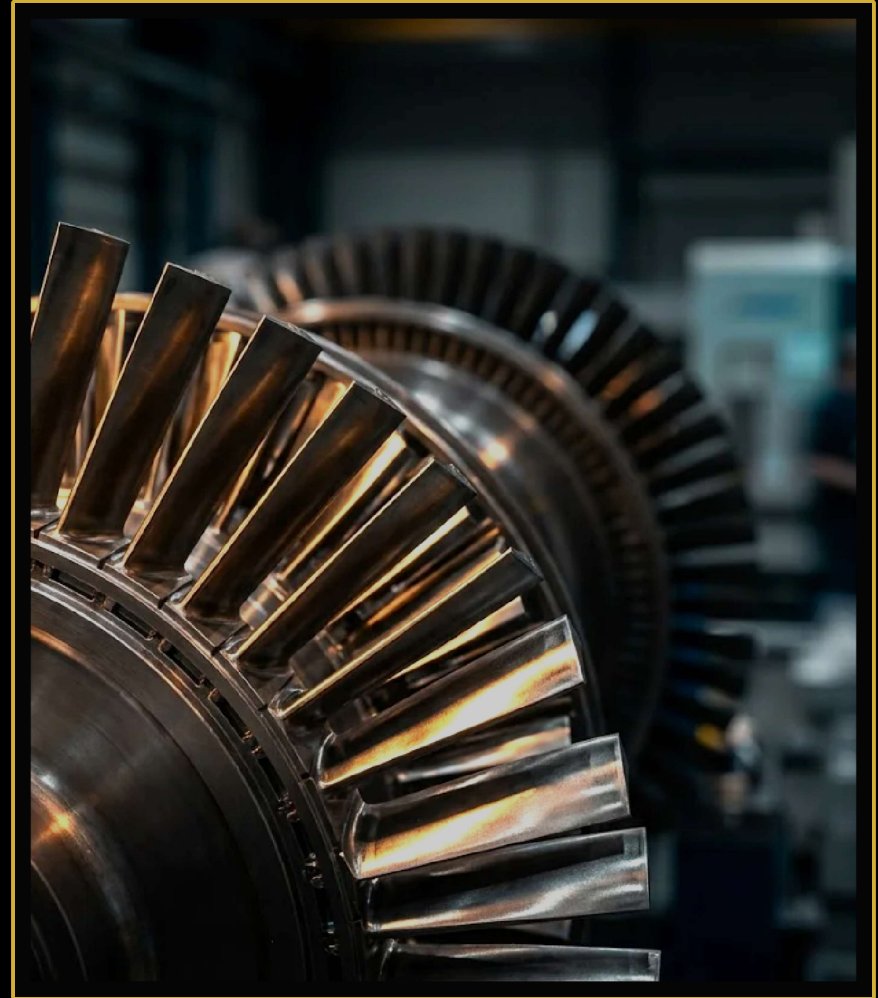

ENGINEERING QUALITY

Industrial *Excellence.*

Advanced Thermal Exchange Systems

Our proprietary energy conversion systems utilize robust industrial piping, high-quality pressure valves, and precision mechanical control mechanisms.

This state-of-the-art engineering ensures maximum thermal efficiency, highly reliable continuous uptime, and uncompromised safety during the entire power conversion process.

TARGET MARKETS

Strategic *Applications.*

Agriculture

Renewable energy and water purification for sustainable farms.

Mining

24/7 baseload power for remote resource extraction.

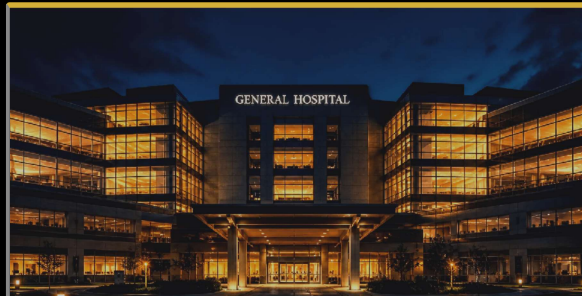

Data Centers

Uninterrupted operations and precise climate control.

Casinos

Continuous clean energy for gaming and entertainment.

Hospitals

Healthcare resilience with lifesaving power and water.

Manufacturing

Continuous, low-cost power for heavy industrial production.

PROVEN LEGACY

Proven *Track Record.*

20+

YEARS FIELD OPS

Proven reliability and continuous engineering innovation.

30+

INSTALLATIONS

Including global Fortune 500 facilities and stock exchanges.

1k+

MW CAPACITY

Massively scalable manufacturing production run-rate.

\$8B

EXECUTION PARTNER

KBR — Fortune 500 Global Engineering Leader.

Real-World *Performance.*

| How well does our technology actually work in the field? Look at our legacy.

MANUFACTURING FACILITY

IBM Semiconductor Plant

- / 20+ years of continuous 7MW performance using waste heat.
- / Won an ASHRAE Award in 2007 for this project's performance.
- / This project is still in active operation today.

MONTREAL, CANADA

Montreal Stock Exchange

- / Installed 3.5MW (1,000 tons) of solar cooling absorption chillers.
- / ZERO downtime in 20+ years of continuous operation.
- / Highly efficient system design utilizing only 4 moving parts.

ACQUISITION

Capital *Architecture.*

| The ultimate hedge against utility inflation. Cease renting electricity and architect your energy sovereignty.

ASSET OWNERSHIP

Direct Purchase

- / 5+ MW Project Size
- / **Own the Power \$0/kWh**
- / 30% Federal ITC Tax Credit
- / 10% Federal Bonus ITC (USA Made)
- / MACRS Accelerated Depreciation

ENERGY AS A SERVICE

Power Purchase (PPA)

- / 5+ MW Project Size
- / **Reduced Price per kWh**
- / \$0 Upfront Capital (Deposit Required)
- / 15 YR Minimum Guaranteed Stability
- / Maintenance & Service Included
